                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                          The present invention relates to compositions and methods for treating compriheral artery disease. The method comprises administering fibroblast growth factor-2 (FGF-2) to a patient in two doses, where a single dose is administered into each leg of the patient within a one hour period. FGF-2 is useful for treating peripheral artery disease, improving peak walking time with intermittent claudication, reducing body pain, improving stair climbing ability and reducing the severity of the claudication and critical inference of the stair climbing ability and reducing the severity of the claudication FGF-2 is also useful for treating or preventing peripheral artery disease (PAD) including claudication and critical limb ischaemia, and even those suffering from a wide spectrum of related farctions, stroke, diabetes, dyslipidaemias, hypertension and patients have had surgical or catheter-based revascularisations. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               26-JAN-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                              The peptide sequence was deduced from the synthetic DNA sequence prepd. as described in EP-363675. E. coli cells transformed with the synthetic DNA were lysed and the supernatent purified, giving a 50:50 mixture of a 154 residue bFGF (2-155) having the amino acid sequence of the 155 residue form (Abraham et al., Science, 233, 545-548, 1986) but without the N-terminal Met; and a 153 residue bFGF (3-155). An adduct of bFGF formed with heparin or heperan sulphate conts. the bFGF 9-10 Leu-Pro bond can be cleaved with pepsin A or cathepsin D to cleave this bond and release a peptide with the N-terminus be deleted up to and including residue 9, sequentially, giving a protein of X-bFGF(9-155), where X is any peptide from residues 1-9 of bFGF sequentially. This cleavage method can be used to obtain a pure form of the 146 amino acid bFGF (10-155) bFGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 3; Page 27; 36pp; English

                                                                                                                                This is a basic fibroblast growth factor (bFGF) of human origin. It is used in a compsn. to treat periodontal disease. The compsn. promotes regeneration are attachment of the bone of the tooth socket, the periodontal membrane and the cementum and regeneration of dentine. The bFGF may be prepd. by recombinant methods, and is pref. formulated in a gel for application to the affected area.

It is used in a compsn. to treat periodontal disease. The compsn. promotes regeneration an re-attachment of the bond the tooth socket, the periodontal membrane and the cementum and regeneration of dentine. The bFGF may be prepd. by recombinant methods, and is pref. formulated in a gel for application to the affected area.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Dental treatment containing basic fibroblast growth factor \cdot treating periodontal disease and promoting implant fixation dentine regeneration

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches 146;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gold
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (bFGF_155). The invention relates to a novel method for indentifying nucleic acid ligands that photocrosslink to a target from a candidate mixture of nucleic acids which contain one or more photoreactive groups, by a modification of the systematic evolution of ligands by exponential enrichment (SELEX) method, termed photoSELEX. The use of photoaptamer as a capture molecule in a diagnostic assay adds an extra dimension of specificity and supplants the need for sandwich assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying nucleic acid ligands photocrosslinking to target from nucleic acids containing photoreactive groups, by modification of systematic evolution of ligands by exponential enrichment method, termed photoSELEX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2002-179798/23

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a recombinant genome of human originated basic fibroblast growth factor(bFGF) having increased extracellular secretion efficiency, an expression vector and therapeutics containing the gene and the vector. The present sequence is that of a polypeptide, useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Recombinant genome of human originated basic factor(bfgf) having increased extracellular sits expression vector -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2002-398942/43.

One or more positively-charged AAs in the heparin-binding domain (AAs 128-138) are replaced by neutral or negatively-charged residues as indicated in the feature table. A recombinant vector (pUC9-TSF11 or pUC9delH3-pTSF-3) contg. the mutated DNA can be used to transform bacterial or mammalian host cells for prodn. of the analogue.
